

Fitness Performance and Exercise Behavior Analysis

This dashboard analyzes workout habits, calorie expenditure, hydration trends, and exercise behavior using fitness activity data.

Created by: Kiara Bevacqua

Metric	Value
Avg Calories Burned	905.422
Avg Session Duration	1.26
Most Common Workout Type	Strength
Largest Age Group	45-59

Key Findings

Findings

- HIIT and Strength workouts showed the highest average calorie expenditure.
- Water intake showed little observable relationship with workout duration.
- Advanced users showed higher average calories burned.

Limitations

- The data contained more participants aged 45-59 compared to younger groups.
- Water intake data might not fully represent hydration level.
- The dataset did not include recovery or sleep-related variables
